

System Architecture

Version:	v1.0
Author:	James Turner
Date:	2022-06-14
Status:	ARCHIVED

WARNING: This document is OUTDATED. See v3 for current architecture.

Overview

Initial draft of the monolith architecture for the Acme platform.
All services run on a single EC2 instance behind an ALB.

Components

- + Frontend: React SPA served by Nginx
- + Backend: Django monolith
- + Database: PostgreSQL on RDS (single-AZ)
- + Cache: None (planned for v2)

Known Issues

- + No disaster recovery plan documented
- + Scaling strategy TBD
- + Secrets stored in .env files (see TODO list)
