

AWS Deployment Guide

Version:	v2
Author:	DevOps Team
Date:	2023-05-20
Status:	REVIEW NEEDED

WARNING: Written for v2 architecture. May not match current EKS setup. Verify before use.

Prerequisites

- + AWS CLI configured with appropriate IAM role
- + kubectl configured for the prod EKS cluster
- + Helm 3.x installed
- + Docker image built and pushed to ECR

Deploy Steps

1. Authenticate: `aws ecr get-login-password | docker login`
2. Update Helm values: `edit helm/values-prod.yaml`
3. Run: `helm upgrade --install acme ./helm/acme -f helm/values-prod.yaml`
4. Monitor rollout: `kubectl rollout status deployment/acme-api`

Secrets

Secrets are in AWS Secrets Manager. Retrieve with:

```
aws secretsmanager get-secret-value --secret-id acme/prod
```

Rollback

```
helm rollback acme [revision]
```

Check revision history: `helm history acme`
