

Database Failover Runbook

Version:	v2 (Sarah comments)
Author:	Carlos R. + Sarah Kim
Date:	2024-01-30
Status:	SUPERSEDES v1 - use this

Changes from v1

Sarah's comments incorporated - added Redis failover section.

When to Use

If primary RDS or Redis cluster is unavailable for > 5 minutes.

RDS Failover

Same as v1 steps 1-5.

Redis Cluster Failover (NEW)

- 1. Check ElastiCache console for node failures
- 2. Redis Cluster mode: automatic failover is enabled
- 3. If full cluster failure: recreate from snapshot
 - aws elasticache create-replication-group ...
 - (full command TBD - ask Carlos)

NOTE

Sarah flagged: the Redis cluster was reconfigured in Dec 2023.
These steps may no longer match. Verify with DevOps before using.
